

Conversation Breakdown: Daniel and Drew

Daniel is representing the agency and explaining what services can be provided. Drew is the prospective client who has two product businesses and needs help improving the websites, tracking, and marketing infrastructure.

The conversation centered on two brands:

1. **Chocolate brand** www.chiocolate.com
Product line includes adaptogenic / Chinese herb formula dark chocolates.
Initial formulas mentioned: **Adapt, Serenity, Dopamine**.
Future formulas mentioned: anxiety, PMS, cardio, neurogenesis, menopause, and others.
2. **OILIO Labs**
URL mentioned: www.oiliolabs.com
Product line includes tattoo oil and a special skin serum.
Current issue: the site primarily goes to the tattoo product, but Drew wants a splash / landing page that introduces both products.

The chocolate brand URL was **not clearly stated in the transcript**. It needs to be confirmed by Drew before proposal delivery.

Internal Brief for Daniel to Present to Kyle

1. Client

Client name: Drew

Project type: E-commerce website modernization, Shopify integration, Meta Pixel setup, launch readiness, and future marketing support.

Current position: Drew has products, existing Shopify infrastructure, and active businesses, but limited reach and outdated web presence.

Drew is bootstrapping and does not have a large upfront budget. He wants to build responsibly, start with core infrastructure, and scale marketing as sales begin to come in.

2. Main Need

Drew has good products but lacks reach.

His main problems are:

1. Existing websites do not reflect the new graphics and current product direction.
2. He needs a cleaner, more modern website experience.
3. He needs proper tracking installed from day one.
4. He needs help setting up Meta Business infrastructure.
5. He wants to eventually run ads through Facebook and Instagram.
6. He needs a scalable system that can support Shopify, product inventory, checkout, lead capture, retargeting, and future marketing.

Daniel framed the agency service through the agency's core framework:

Be Seen. Be Heard. Be Felt.

For Drew, this means:

Framework	Meaning for Drew
Be Seen	Stronger brand presence and more identifiable websites
Be Heard	Marketing plan, paid ads, Meta, SEO, content strategy
Be Felt	Website experience that educates, converts, and builds trust

3. Brand 1: Chocolate Website

URL

www.chiocolate.com

Product Summary

Drew has a dark chocolate product line based around Chinese herb formulas and adaptogenic benefits.

Products mentioned:

1. **Adapt**
2. **Serenity**
3. **Dopamine**

Future product categories mentioned:

1. Anxiety
2. PMS
3. Cardio
4. Neurogenesis
5. Menopause
6. Additional Chinese herb formulas

The labels / graphics for the first three chocolates already exist or are currently being finalized. Drew has printers handling foil and packaging.

Current Situation

Drew has Shopify already set up. Products, ordering, and checkout appear to exist already.

Daniel's recommendation was to avoid relying only on Shopify's standard theme experience and instead create a more polished, custom front end that connects to Shopify through the API.

Proposed Approach

Build a new front-end website for the chocolate brand while keeping Shopify as the back-end system for:

1. Products
2. Inventory
3. Checkout
4. Shipping
5. Order management
6. Payments

The front-end would create a more elevated brand experience while Shopify continues handling commerce.

Scope for Chocolate Site

Recommended scope:

1. Website discovery and direction document
2. Review of existing brand assets

3. Review of current Shopify product setup
4. Modern landing page / homepage
5. Product display sections for Adapt, Serenity, and Dopamine
6. Shopify product connection
7. Add-to-cart or checkout flow integration
8. Meta Pixel installation
9. Basic event tracking
10. Email capture opportunity
11. Mobile optimization
12. QA testing
13. Launch support
14. Post-launch support window

Pricing Discussed

Daniel estimated:

\$3,000 to \$4,000 for the chocolate website build, Shopify connection, tracking setup, and launch infrastructure.

This price was discussed as a ballpark and needs Kyle's review before final proposal.

4. Brand 2: OILIO Labs

URL

www.oiliolabs.com

Spelling should be confirmed. Drew spelled it as:

O I L I O Labs

Product Summary

OILIO Labs has at least two products:

1. Tattoo oil
2. Special skin serum

Drew described these as his inventions.

Current Situation

The current website appears to mainly lead into the tattoo product. Drew wants to update the site so both products are visible from the beginning.

Drew's Requested Update

Drew specifically asked for a splash page that shows both products.

Daniel clarified that this could become a cleaner branded landing page rather than just a simple Shopify edit.

Drew liked the better version but is cost sensitive.

Scope for OILIO Labs

Recommended scope:

1. Landing page / splash page
2. Two-product presentation
3. Clear pathway to tattoo oil
4. Clear pathway to skin serum
5. Existing Shopify connection
6. Light visual modernization
7. Meta Pixel installation
8. Basic event tracking
9. Mobile optimization
10. QA testing
11. Launch support

Pricing Discussed

Daniel estimated:

\$1,000 to \$1,500 for the OILIO Labs landing / splash page.

Daniel also mentioned that depending on complexity, it could potentially go higher, possibly around **\$2,000**, but the goal was to keep it efficient because Drew is providing assets and the Shopify setup already exists.

5. Combined Project Pricing Direction

The rough combined pricing discussed was:

Project	Estimated Range
Chocolate website	\$3,000 to \$4,000
OILIO Labs splash / landing page	\$1,000 to \$1,500
Possible combined range	\$4,000 to \$5,500

A clean proposal could present this as a bundled project:

Suggested Proposal Structure

Option A: Core Build Bundle

\$4,500

Includes:

1. Chocolate website refresh / rebuild
2. OILIO Labs splash page
3. Shopify product connection for both
4. Meta Pixel installation
5. Basic tracking setup
6. Mobile optimization
7. QA and launch support

Option B: Enhanced Build Bundle

\$5,500

Includes everything in Core Build, plus:

1. Stronger product storytelling
2. Email capture setup
3. More refined product page layouts
4. SEO foundation
5. Meta campaign launch framework
6. Additional post-launch support

Optional Monthly Marketing Retainer

To be proposed separately.

This should not be bundled into the build price unless Kyle and Daniel decide to create a startup-friendly package.

6. Timeline Discussed

Drew wants to begin around:

June 1

Daniel estimated:

1. If assets are provided upfront, each site could be done quickly.
2. The chocolate site could take approximately 2 weeks.
3. OILIO Labs could be faster because it is simpler.
4. Both sites could potentially be completed in a 3-week focused sprint.

Proposed Timeline

Phase	Timing
Prep and proposal approval	Before June 1
Kickoff	June 1
Discovery and direction doc	Days 1 to 2
Initial build	Days 3 to 7
First review	End of week 1
Revisions and integrations	Week 2
QA and launch prep	Week 3
Launch target	Mid to late June

7. Marketing and Tracking Setup

Daniel explained the importance of installing the Meta Pixel early so Drew can start building retargeting audiences before he spends serious ad money.

Tracking Infrastructure Needed

For each business, Drew should have:

1. Meta Business account
2. Facebook page
3. Instagram business account
4. Meta Pixel
5. Shopify connected to the website
6. Pixel installed on the front-end site
7. Event tracking for page views, product views, add to cart, checkout, purchase, and leads if possible

Daniel's Marketing Recommendation

Daniel suggested that once the websites and tracking are live, Drew can start with a modest monthly ad budget.

Budget discussed:

1. Minimum possible starting range: **\$300 to \$400 per month**
2. Comfortable starting point: **around \$750 per month**
3. More aggressive range: **\$1,500+ per month**

The ad spend would be paid by Drew directly to Meta.

Agency management would be separate from the website build fee.

Suggested Ad Budget Allocation

For a starter budget around \$400 per month:

Category	Purpose
Lead capture	Build email list

Cold traffic	Bring new people to the site
Retargeting	Re-engage visitors and warm audiences

Daniel mentioned retargeting as a major priority because people who have already visited the site or interacted with the brand are more likely to purchase.

8. Monthly Retainer Discussion

Daniel made it clear that the website build and the ongoing marketing retainer are separate.

Retainer Could Include

1. Meta ads setup
2. Campaign management
3. Creative testing
4. Audience refinement
5. Retargeting
6. Lead generation
7. Email capture strategy
8. SEO support
9. AI search visibility strategy
10. Monthly reporting

Positioning

The retainer should be framed as optional after the sites are live.

The goal is that the retainer should eventually justify itself through increased sales, lead capture, and marketing performance.

9. Important Clarifications Before Proposal

Daniel and Kyle should confirm these before sending a final proposal:

1. Exact chocolate brand name
 2. Exact chocolate website URL
 3. Correct spelling of OILIO Labs
 4. Confirm whether the OILIO URL is **oiliolabs.com**
 5. Shopify login access for both brands
 6. Whether both brands are in the same Shopify account or separate Shopify stores
 7. Whether Drew already has domains connected
 8. Whether Drew has existing product photography
 9. Whether Drew has final product label files
 10. Whether copywriting is included or Drew will provide product copy
 11. Whether email capture platform is already chosen
 12. Whether Meta Business accounts already exist
 13. Whether Instagram accounts already exist
 14. Whether the agency is expected to set up Meta Business from scratch
 15. Whether SEO is basic setup or ongoing SEO strategy
 16. Whether ad management begins at launch or after launch
 17. Whether payment terms are deposit-based or full upfront
-

10. Items Drew Needs to Provide

Before kickoff, Drew should provide:

1. Shopify admin access
 2. Domain access
 3. Current website access if applicable
 4. Product images
 5. Product labels
 6. Product descriptions
 7. Ingredient information
 8. Pricing
 9. Shipping information
 10. Brand logos
 11. Brand colors
 12. Existing photography
 13. Meta Business access if already created
 14. Instagram and Facebook page access
 15. Any email platform access, such as Klaviyo or Mailchimp
 16. Desired launch order between the two sites
-

11. Proposal Language Recommendation

Daniel should avoid guaranteeing specific ad results in the written proposal.

In the call, Daniel used strong examples around ad costs, lead costs, returns, and Meta learning. For the proposal, those should be softened into performance goals and strategic expectations.

Better proposal framing:

“Paid advertising performance depends on product-market fit, creative quality, budget, seasonality, audience data, and campaign learning. Our role is to build the infrastructure, tracking, strategy, and campaign system needed to give the brand the best chance of scaling responsibly.”

Avoid written claims like:

1. “You put in \$2k and make \$8k.”
2. “Leads will drop to 10 cents.”
3. “The ads will pay for themselves.”
4. “Facebook will know exactly who to target after 50 purchases.”

Those ideas can be explained conversationally, but they should not be contractual.

12. Recommended Proposal Structure

Proposal Title

Website Modernization, Shopify Integration, and Growth Infrastructure for Drew’s Product Brands

Project 1

Adaptogenic Chocolate Website Build

Includes:

1. Website strategy and direction document
2. Custom front-end design
3. Shopify product integration

4. Product section for Adapt, Serenity, and Dopamine
5. Mobile responsive build
6. Meta Pixel installation
7. Basic tracking setup
8. QA testing
9. Launch support

Project 2

OILIO Labs Splash Page and Product Landing Update

Includes:

1. New splash / landing page
2. Two-product presentation
3. Pathways to tattoo oil and skin serum
4. Shopify connection
5. Mobile responsive layout
6. Meta Pixel installation
7. QA testing
8. Launch support

Optional Add-On

Marketing Launch System

Includes:

1. Meta Business setup support
2. Instagram and Facebook connection
3. Campaign structure
4. Retargeting audience setup
5. Lead capture campaign setup
6. Monthly ad management

13. Clean Internal Summary for Kyle

Drew has two product brands and needs help modernizing the web experience, connecting the front end cleanly to Shopify, and setting up the infrastructure for paid marketing.

The first brand is an adaptogenic / Chinese herb dark chocolate line with products called Adapt, Serenity, and Dopamine. Shopify is already set up, product labels are underway, and Drew needs a better website experience that can support brand storytelling, product sales, tracking, and future ads.

The second brand is OILIO Labs, likely at oiliolabs.com, featuring tattoo oil and a skin serum. The current site mostly leads into the tattoo product, but Drew wants a new splash page that presents both products clearly.

Daniel discussed a rough price of **\$3,000 to \$4,000** for the chocolate site and **\$1,000 to \$1,500** for OILIO Labs, with a possible combined project range around **\$4,000 to \$5,500**. Drew is budget conscious and bootstrapping, but he wants to start around **June 1**.

The build should include Shopify integration, Meta Pixel setup, basic event tracking, mobile optimization, QA, and launch support. Ongoing Meta ads, retargeting, lead capture, SEO, and AI search visibility should be proposed as a separate monthly retainer after the websites are live.

The immediate next step is for Daniel and Kyle to agree on scope, pricing, and payment terms, then send Drew a clear proposal with deliverables, exclusions, timeline, and required client assets.
